Live demo - http://www.viyeah.com

My responsibilities:

- Design the database.
- Design the architecture of system.
- Develop core feature of this system - page builder.
- Develop analytics.
- Support multiple languages.
- Communicate with designer for UI.

- Communicate with developers to ensure that they build extra features as expected.

Main functionalities of page builder:

- Let users edit any content of template easily and effectively.

- Provide all the core and advanced widgets such as title, text, images and charts etc to design a fully-featured site.

项目展示

Project Work

- Support several layouts for one widget so as to let users change the layout easily.

- Support instant preview on pc, pad and phone.

Functionalities of analytics:

- Support trend analysis.
- Support visitors analysis.
- support referrers analysis.

TomatoCart - open-source e-commerce platform

Building *TomatoCart -* an open source e-commerce platform:

• The web desktop application mimics the user experience of a desktop Operating System, offering features and applications similar to a PC environment so that users can easily start work.

- Meanwhile, multi-task is supported by multi-window operation, enabling users to work with several modules such as products, customers and orders at the same time
